SKILLS

Languages: JavaScript, TypeScript, Dart, Python, Java, C++, C#, SQL

Web & Backend: React.js, Next.js, Node.js, Express.js, NestJS, Spring Boot, REST API design, JWT, RBAC, Socket.IO, Prisma, Tailwind CSS

Mobile & Games: Flutter, React Native, Expo, Unity 6, native modules (Kotlin, Objective-C++), procedural generation, editor tooling

Data & Infrastructure: MySQL, PostgreSQL, MongoDB, ClickHouse, SQLite, Redis, Firebase, Docker, Nginx, systemd, Vercel, Netlify, Azure

Tools & Testing: Git/GitHub, Claude Code, Playwright, Selenium, Swagger/OpenAPI, Zod, PDFKit, JIRA

EXPERIENCE

SourceLabs

6 Weeks

Web App Intern

Lahore, Pakistan

- Built and shipped full-stack features across **MongoDB, Express, React and Node.js** under senior-engineer review.
- Designed **REST** endpoints and component-based **React** interfaces with consistent client-side state management.

Coshi Infrastructure

12 Weeks

Web App Intern

Causeway Bay, Hong Kong — Remote

- Delivered assigned modules across several web stacks, ramping quickly on unfamiliar codebases and conventions.
- Worked asynchronously with a distributed team across time zones, keeping every module on schedule.

PROJECTS

Company's Voice Portal | *React, Vite, Tailwind CSS, Node.js, Express, MySQL, JWT, PDFKit, REST API*

- * Built a **billing and invoicing platform** that syncs accounts, rate plans and usage from a provider API, prices every record against the client's own plan, and issues **PDF invoices** in the operator's existing layout.
- * Implemented the **rating and tax engine** end to end — per-destination rounding, ordered tax chain, non-compounding arrears — plus usage import and SMTP invoice delivery.

RTP Logger | *NestJS, ClickHouse, Prisma, React, Material UI, Vector, Docker*

- * Built a self-hosted **log analytics platform** ingesting two high-volume feeds, one text and one binary, into **ClickHouse** through Vector and goflow2 — replacing an **Elasticsearch/Logstash** stack on hardware that could not afford it.
- * Delivered a **NestJS** API with **JWT** auth and role-based access, and a React explorer with time-range search and dashboards; shipped both Docker Compose and native systemd deployments.

Company's CRM | *Express, Prisma, PostgreSQL, MySQL, Redis, Socket.IO, React, Redux Toolkit*

- * Contributed to a **multi-tenant SaaS CRM** integrating a third-party call-centre platform over its own database and event feed, with organisation-scoped access enforced in middleware.
- * Built **live agent wallboards** on Redis-cached state pushed over **Socket.IO**, with Recharts supervisor dashboards reporting real-time queue and agent metrics.

I Drive — Open-World Driving Game | *Unity 6, C#, procedural generation*

- * Built a **1 km²** streamed open-world city with **no imported art**: roads, buildings, vehicles, characters, audio and the entire interface are generated from code at runtime, five materials for the whole city and **~2.5 ms** to rebuild a chunk.

I Run — Endless Runner | *Unity 6, C#, object pooling, editor tooling*

- * Built a three-lane endless runner whose generated layouts are **survivable by construction**, with **zero steady-state allocation** and an editor pass that bakes the runtime art into editable prefabs and scenes.

EDUCATION

COMSATS University Islamabad, Lahore Campus

Bachelor of Science in Software Engineering

Lahore, Pakistan

Graduated Jun. 2026

Punjab Group of Colleges

Intermediate in Computer Science

Lahore, Pakistan

Oct. 2020 – May 2022
